The U.S. lift Truck division based in Cleveland has a skilled team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's original domestic forklift marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled lift trucks as part of a nationwide equipment expansion project. Initial product sales of this industrial equipment focused on large business communities, the armed forces and on state-run firms. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical education grew to become the new focus for enhancing quality and product development.

Domestic lift truck trade for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's sophisticated technological enhancements combined with sales success placed them in a position of significant expansion of their lift truck operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to respond to competitive pressures in the US materials handling industry. This venture greatly expanded Daewoo's forklift sales. Construction was finished in 1984 to facilitate a modern plant which helped launch the business for the fabrication of high end added-value goods suited for export. In 1993, the company had a global sales network and started exporting versions they had established through in-house expertise, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into overseas marketplaces.
