

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually an apparatus made out of high quality materials meant to be able to withstand the most difficult operations and work environments. This piece of equipment could enable drivers to be able to control the forks hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the arms or the entire load in order to facilitate much more precise lifting and placement in a faster and more efficient way.

The unique fork pocket design enables the individual operating it to safely sway the unit's forks without any worry of damaging the positioning cylinders. This can allow the operator the option to either execute independent or simultaneous fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be converted into blade positioners on existing units.
